Rescue Grass.—Gentlemen: The publication of my article in the Mobile Tribune, which you had the kindness to republish in your excellent journal, I have obtained some important facts about this very valuable species of grass, which I did not possess at the time that communication was made. In the month of May or June last, I sent several specimens, when in seed, to Dr. HEN NEISLER, our ablest botanist here, for the purpose of having it determined what was its true name and the place of its nativity. This Dr. could not decide, even with the aid of all his botanical books. At my request, and in accordance with his wish, he sent specimens of it to Dr. Torrey of New York, the accomplished. Botanist in the service and pay of Government. Dr. Torrey wrote back the day after receiving them and gives its true name and native place. He calls it "Ceratophyllum demersum," and that it is a native of the Pacific coast; I understand him to say that it has the largest grain of any known species of grass—hence its great value for making hay and that if climaxed, it will be extremely valuable to the South. The acclimation of the seed of this grass has been successfully accomplished, and it only needs to be known to ensure its cultivation by every planter throughout the country. I have also obtained another fact about it, which I did not know when I penned the article alluded to. I find the seeds which fell to the ground when the seeds were ripe in June last, and which were turned under with a spade in order to plant the bed in Snap Beans, came up the first of September last. This is important, for it gives over a month the start of seeds planted in the last of September, or the first of October, which was the period I stated for sowing them. This year the seeds have vegetated and grown off beautifully over a month earlier than they did previously, which I attribute to acclimation. As this grass grows rapidly, you perceive that it enables a planter to put all his stock to grazing upon it, so soon as his pea fields are eaten out which is generally in November. The seeds should be planted then at the time they mature, or in other words, in June, July, or August, as it will accelerate their vegetation, and give the best of grazing early in November. This should be the plan after obtaining plenty of seed. With a small quantity to begin with it would probably do as well to sow in September or October. At the time of sowing in June, I recommend all who cultivate their grass to sow along with it at the same time, a crop of peas, and plough both under. The peas will come up, and shade the field during summer. They protect it from washing rain. And they give a valuable food to fatten hogs, besides returning a large crop of vegetable manure to surface. The grass seeds, which were sown with them, will come up from the last to the 19th of September, and in November is ready to receive the stock, which, by that time have consumed the peas and grass in the corn fields. This grass will now keep them fat through the winter and spring. It protects the field from the wash of the heavy rains during that period. It enables the planter to have rich milk, thick cream, sweet scented, and yellow butter, with fat, tender beef, mutton, kid, pig, turkey, and chickens, for his table. It will give him from four to six tons of nutritious hay per acre, for his horses and mules. And, also, a good coat of manure to the field. In the spring, should it be desired to cultivate the field in corn or cotton, then turn off the stock, and put in the plows, and turn the green grass under. This gives another coat of manure to the field. It is easily done—and plant it—I will say that if the crop is intended, as it should be, it will astonish all who see it, and will do to drag on. But suppose it was not planted, and the grass followed with the pea continued, until the third year, you do not see, how much better it would produce? Now, gentlemen, I say this is the cheapest, the easiest, the simplest, while it is the most paying plan to reclaim exhausted fields, and re-fertilize those not yet so, and the ingenuity of man can devise. It costs nothing, as it were, either in money, time, or labor. It will restore the field, and make it produce better than it ever did, and pay you all the time it takes in doing it. If there is a better one I would like to hear of it. This very grass, and the Southern pea can do, and will, if adopted and used.

Very truly your obt. servant,
B. V. IVERSON.

P.S.—The English of its botanical name is "Short awn, horn grass." It takes this from the shortness of the awns, and the points resembling horns. It is as nutritious as barley, and stock are found of it as they are of that. Without any reservation, I say that it is the most valuable grass ever introduced in our section, or which can be introduced. Persons who may desire to get seed of it, can address me at Columbus, Ga. (post paid), and next year they shall be supplied as soon as the seeds are gathered. The price is \$5 per peck, which is as much as is necessary to begin with. Their names shall be enrolled in my book. B. V. I. N. B. This grass can be destroyed at any stage; before seeds ripen and shed out, by ploughing.

A full and complete examination of this harbor of New York is now being made; also of warves, piers, bulkheads, docks, and ships as they now are; this, when completed, will show the encroachment made from time to time upon the navigable waters of the East and North rivers.

Washing the extremities of the body at night and the head in the morning, with cold water is a good substitute for full bathing, when the latter cannot be indulged, and will preserve those parts from suffering by bad weather. It should be practiced daily. Those who do not practice it would do well to try it.

The clergyman who "came to a head" in his discourse, was much disappointed to find no brains in it.

Attention Merchants and Farmers!
THE steamer *Hawessee* being now in complete running order, will make regular trips from London to Knoxville, Knoxville to Florida and Danville, and as much farther up the Holston River as the low stage of water will admit, during the ensuing Fall and Winter. The *Hawessee* is a very light draught Boat with more power according to tonnage than any boat on the river consequently can run when other boats are compelled to lay up.

Merchants living in Upper East Tennessee can now avoid the tedious delays of goods on this route heretofore, by consigning their goods to the care of "Hawessee Boat," or H. Ingall, London, Tenn. All Produce brought out at the very lowest rates that can possibly be afforded.

HAWESSEE STEAM BOAT CO.
Persons that may have goods on the way can have them forwarded by this Boat by sending orders to that effect to H. INGALL.

To Persons Wanting Grinding done at

LENOIR'S MILLS.
Owing to scarcity of water, we cannot now grind grain by the mill, as we do when water is plenty. After Winter rains come we will grind wagon loads as heretofore, with dispatch.

Those having black wheat, stalks, straw and other trash in their stacks, are requested to bring them before they bring the wheat to the mill. We have much wheat in the mill, and cannot count on it being returned by weavers from other persons' wheat. Wm. LENOIR & BROTHERS.
